

AP cannot connect to PoE switch

Overview

ICX does not correctly allocate PoE budget for the respective port when AP is using PoE injector. However, When I checked interface status using 'show int status', It looks 'notconnect' status. - LED is blinking 'Red' and 'Green'. -. Steps to troubleshoot AP power issues, including switch port capabilities / total load, per number of AP power requirements. The remaining three points are powered by a TP-link PoE injector. They cannot connect to the POE switch, can't be detected even with CDP neighbor command, below screen capture of their power details: power inline gi1/0/2 Interface Admin Oper Power Device Class Max (Watts). When a problem occurs with PoE, in most cases, the error symptom can be simply shown as the PoE switch not providing power, and the powered devices will stop working.
