

Brazil First Fiber

Overview

Fiber Optic: The fastest, most stable option, using light to transmit data. 1992: RNP (Rede Nacional de Ensino e Pesquisa) launched for Rio-92, connecting universities. Jorge Elias Oliveira Farias is a farmer in rural Brazil. But he's recently added a new title to his resume: content creator. Excited about the arrival of broadband on his property, he's set up his own YouTube channel, where he shares his work routine and helps others by teaching them how to do the. Data, sound and image transmission technology was produced in Brazil, for the first time, in one of the laboratories of the Gleb Wataghin Institute of Physics in the late 70s. Not everyone who witnessed the laying of the first optical fiber on Brazilian soil remembers that day like José Mauro Leal. Internet in Brazil was launched in 1988, becoming commercially available in May 1995. The country had an internet penetration rate of 86. In December 2025, Brazil ranked 26th. While fiber has already overtaken DSL as the largest fixed-broadband platform in the world, this is far from the case in Latin America and the Caribbean, or LAC, where only 35. 1% of connected households use last-mile fiber. As a country with a long coastline, fibre – both terrestrial and submarine – forms a vital part of Brazil's connectivity mix, although there are actually more mobile connections than broadband ones at present.
