

Cable tray materials include several types stainless steel cable trays

Overview

The technological features of modern cable trays include corrosion-resistant materials such as galvanized steel, stainless steel, aluminum, and fiberglass-reinforced plastic. Advanced coating technologies enhance durability and extend service life in harsh environments. Cable trays are available in both metallic and non-metallic materials: 1. The selection of material and finish is a function of the environment in which they are used in a wide range of environments, and easily formable (Appendices II and III). Each cable tray type performs a different function and comes in various materials such as aluminum. Cable trays serve as mechanical support systems designed to hold, route, and protect electrical cables in commercial, industrial, and residential buildings.
