

## Cable tray moving back and forth

### Overview

Cable sag results from incorrect spacing of cable tray supports or from employing the incorrect tray type that is, light-duty perforated trays in high-load applications. Complicating the problem are overloaded trays and large unsupported spans. Safety questions and cable damage can follow from this. Here are main approaches to either fix or stop drooping: 1. Under. Let's get straight to it, why are your cables sagging in a wire mesh basket or cable tray?

It usually comes down to one (or a combo) of the following: lack of proper support spacing, overloading the tray, incorrect installation, or cables simply being too loose. If I try to extend the tray instead, it flips back to a horizontal orientation instead of staying wall-mounted - it feels like there's nothing I can do to. Cable tray failures can cause operational disruptions, equipment damage, and safety risks.
