

Cable trays inside cold aisle cabinets

Overview

Cable management accessories such as cable trays and cable management rings can be installed inside the cabinets to help route the structured cabling to the outside, either from above or below the rack. CAC can be created by installing roof panels and sliding doors at each end of the rows over a raised floor. Belden's Aisle Containment solutions eliminate the mixing of hot and cold air in data centers to maximize energy efficiency and lower operating costs. FlexFusion™ Cabinets XG offer a unique universal platform. With 35 years of operational experience, EDP designs, manufactures, and installs bespoke aisle containment systems that improve airflow management in Data Centre environments for retrofit, new build, and hyper-scale projects. The twin-wall polycarbonate translucent option supports hot or cold aisle containment and in-row cooling while the height adjustable ducting option enables ducted hot removal with heights to 16 feet. The thermal drop-out option enables fire suppression strategies.
