

Can a surveillance splitter be connected anywhere

Overview

Normally, your NVR has a set number of ports, meaning it can only handle a specific number of cameras directly connected to it. But what if you've got more cameras you want to add, or you want to send that video feed to another monitor in a different room?

That's where a splitter . To expand your NVR security system's reach, you should consider using an NVR security system splitter. It's like. To address the question of how to split IP camera signal, several methods are available, such as using network-based techniques that leverage the power of routers and switches or employing specialized hardware devices like signal splitters. Each method comes with its own advantages, ensuring you. Analog CCTV systems use coaxial cables (RG59) and BNC connectors to transmit video signals from security cameras directly to a DVR recorder. Both RJ45 connectors should be plugged into a PoE switch or a Reolink NVR.
