

## Core switches support routing functionality

### Overview

Core Switches support various routing protocols, such as OSPF (Open Shortest Path First) and BGP (Border Gateway Protocol), enabling intelligent selection of optimal paths for data forwarding based on routing tables. A Core Switch is a high-performance network switch designed to handle large amounts of data traffic, typically positioned at the center of a network, connecting different subnets, VLANs (Virtual Local Area Networks), or network areas. The devices like high-capacity transmitters are placed in this layer. The core. on Cisco Learning Zone E-Learning Series initiative. The Learning Zone is a complete program of training from Cisco IT, aiming to empower employees, at a number of pro re Routing and Switching within Cisco Systems today. This module aims to outline an executive overview of the deployment, the ben n.
