

Cutout for overhead electrical distribution box

Overview

In electrical distribution, a fuse cutout or cut-out fuse (often referred to as a cutout) is a combination of a fuse and a switch, used in primary overhead feeder lines and taps to protect distribution transformers from current surges and overloads. An overcurrent caused by a fault in the. Eaton's Cooper Power series electrical distribution class fuse cutouts are available in a variety of types: universal, arrester combinations and loadbreak types. Over-current protection safeguards an electric system from excessive currents produced by abnormal conditions such as line and equipment overloads, faults. When fused with S&C Positrol® Fuse Links, S&C Type XS Fuse Cutouts provide full-fault-spectrum protection to overhead distribution systems S&C Type XS Fuse Cutouts, when fused with S&C Positrol® Fuse Links, provide full-fault-spectrum protection for overhead distribution systems rated 4. 16 kV. Hubbell's standard electrical cutouts for power line fuses are expertly engineered to enhance the safety and reliability of electrical distribution systems. A high grade engineering thermoplastic has been selected to cope with the harsh installation conditions which include constant exposure to the effects of UV rays, frost, wind and.
