

Distribution room distribution network automation terminal DTU cabinet

Overview

The DSY-D6000 distribution network automation control terminal (DTU) is a monitoring terminal product developed for the increasingly widespread application of ring main units and small switching stations in urban power grids. It can work in conjunction with the main station and substation systems. CSP6000 series power distribution automation station terminal (hereinafter referred to as station terminal) is a new generation of microcomputer-type power distribution automation station terminal integrating telemetry, telecommunication, remote control, protection and communication based on. The ZT-D30 Distribution Automation Substation Terminal DTU is primarily applied in distribution automation systems. Equipped with complete protection, measurement, control and communication monitoring. With complex working environments, large scales of circuits, wide varieties of equipment, traditional medium-voltage distribution network (10kV ~ 35kV) plays a significant role in power transmission, requiring high reliability and stability to guarantee the safety.
