

# Drilling holes for stainless steel cable trays

## Overview

Drill the drill holes with  $\varnothing \geq 7$  mm in the tray rail and tray base. To avoid transverse bending at higher loads, a joint plate must be used for tray widths of 400 mm or more in the joint area of the cable trays that are to be connected. How to cut Oglaend System Support Channels, Cable Ladders and Cable Trays. Oglaend System manufacture and deliver Multidiscipline modular bolted support systems, cable trays, cable ladders and accessories for complete installation and containment of Instrument, Electrical, Telecom, HVAC and Piping. Can I drill holes in stainless steel cable trays after cutting them?

- Citations: Stainless steel cable trays are essential components in various industries, providing a robust and corrosion-resistant solution for cable management. The most common method of locating the hole positions is to use a splice plate as a template. A short piece of side rail that is punched with the standard factory hole pattern can be bolted to. By mastering the technique of drilling holes in stainless steel, you'll not only save time and reduce the risk of damaging your materials, but you'll also open up a world of creative possibilities for your projects. How to Drill Stainless Steel with a Drill. How to drill stainless steel. Equipment you will need; suitable drill bit, cutting fluid, eye protection, ear defenders, heavy duty tape, marker pen or 3 corner pyramid punch, sturdy clamp, and felt or plastic to protect workpiece in the clamp.
