

Drilling holes in the roof to install cable trays

Overview

Drilling Holes for splice plates must be drilled in field-cut cable trays. Passing cable through a roof involves more than just creating a hole and feeding the wire through. This task is critical for multiple reasons: Waterproofing: Ensuring that your installation is fully sealed prevents water leaks that can lead to structural damage. Rooftop installations are often subjected to harsh environmental conditions, including extreme temperatures, high winds, and exposure to UV. The eTile system requires the correct routing of cables under the roof slab. A short piece of side rail that is punched with the standard factory hole pattern can be bolted to. Here is a step-by-step guide on how to install a standard metal cable tray system (e. Before starting, ensure you have the correct personal protective equipment (PPE), including gloves, safety glasses, and a hard hat.
