

## Function of Optical Coupler 7404

### Overview

The 7404 is a classic hex inverter integrated circuit from the 7400 series TTL logic family, widely used for digital signal processing, waveform shaping, and logic level inversion in electronic circuits. The M54/74HC04 is a high speed CMOS HEX INVERTER fabricated in silicon gate C2MOS technology. ) AT  $V_{CC} = 5\text{ V}$   $I_{CC} = 1\ \mu\text{A}$  (MAX. )  $\square I_{OH} \square = I_{OL} = 4$ . It involves the transfer of power between different circuit components, the split or combination of power from multiple locations, and (de)multiplexing of signals with varying frequencies. The objective of this paper is to provide a review of the theory, techniques, and applications of optical. An optocoupler, also known as photocoupler or opto-isolator, is a device which can transfer an electrical signal across two galvanically-isolated circuits by way of optical coupling. Unlike transformers or capacitors, which can only transfer AC signals across the isolation barrier, optocouplers can.
