

Function of Temperature Sensing Optical Cable Junction Box

Overview

Junction temperature is critical to determining the power cycling capability of power semiconductor devices. It detects high heat over a wide area quickly and precisely. This article is published by. Optical Communications and Sensors Laboratory (OCSL), Electrical Engineering Department, King Fahd University of Petroleum and Minerals, Dhahran 31261, Saudi Arabia SEECs Photonics Research Group, Islamabad 44000, Pakistan School of Electrical Engineering and Computer Science, National University. To improve the stability and reliability of the OPGW optical cable junction box, this paper proposes an intelligent monitoring technology, which can comprehensively monitor the environmental temperature, humidity, height, image, internal water immersion and air pressure of the junction box through. Distributed temperature sensing (DTS) measures temperature distribution over the length of an optical fiber cable using the fiber itself as the sensing element.
