

Grounding resistance requirements for independent distribution boxes

Overview

The National Electrical Code (NEC) section 250-56 establishes a requirement for a single ground rod or ground plate to have an earth resistance of 25 ohms or less. Power from factory ground must be installed by a qualified electrician. Each DISTRIBUTION BOX and controller must be grounded. SEC Distribution System extends from the MV (33 kV, 13.8 kV) feeder outlets of HV / MV Substations down to SEC Customer interface including KWH-Meters and meter boxes. To understand the system voltage relationships. Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical insights into proper grounding techniques, with a special focus on how selecting quality materials from a reliable building material supplier impacts your entire system's safety and longevity.
