

Guatemala provides aid for bridge construction

Overview

These agreements, signed through Guatemala's Ministry of Defense, formalize U.S. technical assistance for roads, highways, and overpass development projects, and the expansion of the LOA for the modernization of Puerto Quetzal. Construction is now underway for an important bridge project in Guatemala City. Once the work is complete, it will improve traffic flow in the city, reducing congestion. The Ministry of Communications, Infrastructure and Housing, through the Road Maintenance Executing Unit (COVIAL), is bidding for various repairs to structural bridges in Guatemala. The project includes the rehabilitation and upgrading of 640 kilometers of roads and highways in Guatemala. The Japanese Government is implementing Grant Aid for Disaster Prevention and Reconstruction to the Government of Guatemala to restore the afflicted area, and bridges, water supply facilities and irrigation facilities are reconstructed from the fund. The operation, which has been approved by the IDB Board of Executive Directors, finances a plan to better connect.
