

Highlights of the Level 3 Distribution Box

Overview

Install the Level 3 surge protection device inside the equipment or at the equipment's power supply input, especially for critical or sensitive electronic devices. Technical Requirements Maximum discharge capacity: 20kA per phase or lower. Voltage protection level: $\leq 1800V$. Let's make a hypothesis: a newly built residential area introduces a 10kV incoming line and builds a distribution room. The outgoing line from the low-voltage end of the transformer is 0. Handles three-phase power and typically connects to secondary loads such as motors or machinery. Equipped with larger three-phase circuit. Whether in industrial plants or in buildings: Every technical system depends on a reliable supply with electrical energy. Today, we'll explore how international standards translate into practical protection through rigorous testing methodologies that simulate the harshest conditions on earth.
