

# How many surveillance channels require a core switch

## Overview

For systems with fewer than 32 channels, a core switch is generally unnecessary. To determine whether a core switch is necessary, you must first understand the following key factors: Does it need a core switch for the 100-channel surveillance system?

Before get the answer, we should know the function of switches in different layers. ACCESS LAYER The switches in this layer are directly connected to computers and enable various resources to access the network. They also provide. the network is going to handle the IP CCTV traffic only, it consists of the following: a-Access switches 24 X 100 Mbps cat-6 links for cameras = 15. d- (5 Mp) IP cameras 30 fps ) = 160. Provides the ability to access application systems in the local. The network and the switch(es) that control it must be able to move traffic at "line rate" (full speed) to avoid risking delays, poor camera control or even loss of data. Security. Is it OK for 24 cameras to fight a 24 port Gigabit switch?
