

How to clear network cabinet alarms

Overview

In such cases you can use the Deactivate Alarms utility to remove these permanently active alarms from the Alarms viewer. Do not incorrectly configure the software or the devices. Do not base your maintenance or service actions solely on messages and information displayed by. How can I force a recheck for alarms?

Or clear these alarms without deleting the device and re-adding it (losing all the history)?

Regards, Hello @JSmith, I have not seen an issue with alarms sticking before, but maybe try the following steps: 1) Within the DCE Desktop client navigate to: Device. Alarms on the cabinet may be triggered for a variety of reasons and are required to be cleared for your cabinet to operate normally. You may see an alarm if: To resolve alarms this, press and hold the " down " arrow on the system controller until you see " ---" flash on the screen (approx 5. Active alarms can continue to appear in the Alarms viewer if, for example, an alarm dropout has not been configured, or a device has been removed from the network after an alarm was issued. All the alarms in the switch are either INFO or WARNINGS (of planned reboot and MLT and interface UP and DOWN) alarms. I have given a sample of alarms from one. we are having problems with Alarms that gets stuck into Alarms status table. After an inadvertent power down (contractor turned power off instead of bypass on generator), we still have a cabinet alarm on an Option 61 AC system (it is a CS1000M, but still looks like the good old 61, if you need perspective on the platform).
