

## How to disconnect the fiber optic interface from the switch

### Overview

To remove the interface from the software switch: unselect member lan4 <- Physical interface name. Removing an SFP module from a network switch may appear simple, but improper handling can damage the transceiver, the switch port, or even the fiber interface. Whether you are performing routine maintenance, replacing a failed optical transceiver, upgrading link speeds, or troubleshooting a. Terabit Systems demonstrates the correct way to remove an optical transceiver from a switch. There are no specific requirements for this document. All references to the physical interface must be removed, and the IP address of the physical interface must be set to 0. SFP transceivers allow for the transmission and reception of optical signals in networking devices such as switches, routers, and media converters.
