

How to route cables in a U-shaped cable tray

Overview

To organize cables on your U-shaped workstation, start by assessing your cable needs and listing required cables by type and length. This publication is intended as a practical guide for the proper and safe* installation of cable ladder systems, cable tray systems, channel support systems and associated supports. Utilize trays and raceways to route cables neatly, and position power strips. Hubbell's NEXTFRAME® Ladder Tray is the effective and widely used cable runway that supports and delivers bundles of cable between cabinets, racks, and closets, along walls, and suspended from ceilings. The Ladder Tray features light, rugged, tubular steel construction. For projects that are not 100 percent defined before design start, the cost of and time used in coping with continuous changes during the engineering and drafting design phases will be substantially less for cable tray wiring. At its heart, Cable Tray Design, Layout means choosing and setting up cable trays to hold and protect electrical and data cables. They keep cables safe and make it easy to add or change cables later. We use different types of trays for different jobs: Ladder.
