Explosion-proof electrical equipment, such as explosion-proof distribution boxes, is specifically designed for hazardous environments where flammable gases, vapors, or dust may be present. Proper installation, wiring, and usage are critical to ensuring the safety and functionality of these systems. Often, due to non-standard operations by some technicians, issues like damaged power lines, mainboard components, fuses, and communication failures occur. Explosion-proof distribution boxes are mainly used in coal mines, fire stations, petroleum, petrochemical installations and textile and other flammable and explosive places. These places are more prone to protection accidents. It takes the incoming power and safely distributes it to different circuits throughout your building.
