

## Insufficient grounding location in the distribution box

### Overview

26 mm<sup>2</sup> (10 AWG) ground wire must be used, and in all other markets a 6 mm<sup>2</sup> must be used. Today, we're diving deep into the world of distribution box grounding, breaking down the standards, and shining a light on those sneaky mistakes that even experienced electricians sometimes make. Each DISTRIBUTION BOX and controller must be grounded. Grounding of the units: Attach a ground wire from one of. Insufficient waterproof and moisture-proof measures For outdoor distribution boxes, waterproof and moisture-proof measures are particularly important. This helps to reduce the potential difference that exists between conductive parts and the earth. During fault conditions, low impedance results in high fault current flow, causing overcurrent protective. Understanding IEC 60364 Earthing Requirements is not only important for compliance but also for building trust in the safety and performance of electrical installations.
