

## Is the distribution box made of PC or PVC

### Overview

Generally, high-quality plastic power distribution boxes will use PC as the panel material. Its characteristics such as fire resistance, long-lasting use without yellowing, aesthetics, and durability make it stand out among these plastics. Looking at the market, most brands use. What is the difference between thermoset and thermoplastic materials?

You can find distribution boxes made from various distribution box materials such as steel, aluminum, PVC, polycarbonate, high-density polyethylene, and thermoset plastics like SMC. Each distribution box material has its own. Metal distribution boxes, made from galvanized steel, stainless steel, or aluminum alloys, offer superior mechanical strength, fire resistance, thermal stability, excellent heat dissipation, grounding capability, and electromagnetic interference shielding. These features make them suitable for. In everyday life, the most common plastics are mainly: PP, PC, ABS, PA, PET, etc. Metal boxes are also better at dissipating heat, which is important in preventing fires. They are widely utilized in various fields, including solar energy photovoltaic systems, outdoor lighting installations.
