

Large-scale benchtop FQX metal direct-reading spectrometer

Overview

The adoption of a vacuum optical chamber design, full-digital excitation light source, advanced CCD detectors, and high-speed data readout system equips the device with high properties, ultra-low limit of detection (LOD), long-term stability, and repeatability. Like its predecessors, this tenth-generation SPECTROMAXx (LMX10) furnishes outstanding speed. Users get ultrafast information, and can react rapidly to changing process conditions. The device SPECTROMAXx can identify all elements used in the metal industry, including metal analysis of carbon, phosphorus, sulfur and nitrogen. M5000 bench-top direct reading spectrometer for rapid quantitative analysis of a variety of metal materials in the chemical elements. The instrument is simple to operate, easy to maintain, the analytical accuracy fully meets the requirements of the laboratory, and can be used for a long time under. TY-9000 is Full Range of Solutions for the Entire Metals Industry.
