

## MES Network Core Switch

### Overview

MES is a multi-port, multi-rate managed ethernet switch with a rich set of layer-2 configurable features, both at synthesis & runtime, which allows system vendors to build advanced layer-2 switch systems. MES has been designed to address the maximum throughput using the minimum resources. It implements a Store & Forward switching approach that fulfills Ethernet standard policy regarding frame integrity checking. The switch buffers and verifies each. The MES6000 series is a high performance aggregation 10G core/aggregation switch engineered for modern enterprise and education networks that require reliable, flexible, and scalable connectivity. The switches functionality includes physical stacking, VLAN support, multicast groups, and advanced security features. Extend basic.
