

## Mexican hollow bridge structure

### Overview

The bridge is categorized as a cable-stayed bridge, and has H-pylon supports with semi-fan arrangement. The piers of the bridge were constructed with reinforced cement concrete. Overview The Mezcala Bridge (also known as the Mezcala-Solidaridad Bridge), is located in the state of Oaxaca. It spans the Mezcala River (known locally as the Mezcala Ri). A new national highway program was initiated in Mexico between 1989 and 1994. Under this program, the federal highway "Cuernavaca - Acapulco", also called the "Route of the Sun", was proposed to be re-routed to re. The innovative overall concept of this bridge featured four adjacent main spans sustained by three consecutive harps of cable stays attached to three tall towers, with the central tower being the central main pylon.
