

## Optical cable conduit diameter

### Overview

Optical cable is usually placed in a 25 to 40 mm inside diameter (ID) sub-duct which is placed into an existing larger diameter communications conduit. Most communications conduits can be fitted with three or four sub-ducts. Sub-ducts are often referred to as innerducts. Example: To arrive at a working bend radius for cable installation, multiply 15 times (15 x) the cable outside diameter. 9 in (177 mm) Minimum Working Bend Radius = 6. Knowing the outer diameter of the. The size of conduit you should use depends on the type of fiber optic assembly and the number of cables it will house. An innerduct provides a. Fiber optic cables offer exceptional bandwidth, higher data transfer rates, and minimal signal loss compared to traditional copper cables, making them the preferred choice for infrastructure in everything from residential broadband to global communication networks. However, as efficient and durable.
