

Optical module speed issue

Overview

Try to set the speed setting manually on both sides. For example, some higher-end switch models will have speed set to 'auto-module' by default on the SFP/SFP+ ports, whereas lower-end models like 1xx and 2xx series do not support auto-module. SFP issues are among the most common and frustrating problems in fiber optic and Ethernet networking environments. Whether you are dealing with a no link light, intermittent connectivity (link flapping), or a transceiver not detected error, the root cause is often not immediately obvious. In many. An optical module is a critical component in modern optical communication systems, directly affecting transmission stability, network reliability, and operational efficiency. Check compatibility between the optical module and switch Most switch brands have specific compatibility requirements. 1000Mb/s-speed mode, full-duplex mode, link type is auto negotiation Check whether the port matches the optical module.
