

PBT material full-duplex fiber optic adapter has high construction efficiency

Overview

Built with high-quality PBT plastic and phosphor bronze sleeves, it ensures precise fiber alignment, low insertion loss, and consistent signal transmission. Polybutylene Terephthalate (PBT) is a semi-crystalline thermoplastic engineering polymer, synthesized through esterification and polycondensation of dimethyl terephthalate (DMT) or terephthalic acid (TPA) with butanediol. PBT is a relatively late commercialized general-purpose engineering plastic. A fiber-optic adapter — sometimes called a coupler or bulkhead coupler — is a passive mechanical interface that mates and aligns two terminated optical fibers (i.e., two fiber connectors) such that light can reliably pass from one to the other with minimal insertion loss and maximum return loss. Optimize your high-density network with our SC duplex fiber adapter module. This module supports simultaneous bidirectional data transmission, making it perfect for LAN, SAN, and public networks.
