

Passive Optical Network System for Large Enterprises

Overview

One such solution is Passive Optical LAN (POL), an innovative alternative to traditional Ethernet-based Local Area Networks (LANs). By leveraging fiber-optic technology, POL provides numerous benefits such as improved performance, cost savings, and enhanced network scalability. Optical local area networks (Optical LANs) provide value to enterprises without forcing them to alter how they do business, while existing services provided by their networks remain the same with no change to core and end devices connected. In this article, we. PON has seen a significant evolution over recent years, Ciena's Wayne Hickey reflects on an exciting new area and data center out-of-band management (DCOM). PON isn't just for broadband anymore. With its winning mix of low cost, easy scalability, and simple design, passive optical networking is.
