

## PoE monitoring equipment switch

### Overview

Managed, unmanaged and Power-over-Ethernet (PoE) IP20- and IP67-rated Industrial Ethernet Switches are robust and versatile, helping enable industrial automation and monitoring in challenging conditions subject to extreme temperatures, dust and moisture. It also monitors the power summary of switches supplying PoE, which provides information such as a switch's power budget, used power, remaining power, and power usage. Customers want flexible, customizable and. Power over Ethernet (PoE) is a technology that transmits both data and electrical power over a single Ethernet cable. You can enable PoE information polling on SNMP-polled. As a pioneer in networking equipment innovation, PLANET provides a full range of Power over Ethernet (PoE) product lines, from power sourcing equipment (PSE), including Layer 2+ managed PoE switches, PoE injector hubs, and PoE injectors, PoE extenders, PoE splitters, to PoE powered devices (PD). Managed PoE (Power over Ethernet) switches combine network management capabilities with the ability to deliver power and data over a single Ethernet cable. They enhance industrial network reliability, simplify device deployment, and provide secure, scalable, and centrally controlled connectivity. Lantronix's Power-over-Ethernet switch (PoE switch) family delivers data packets and DC power over the same copper cable, making the deployment of VoIP phones, Wi-Fi access points, security cameras, IoT device options and other systems much simpler. The PoE standard utilizes both power sourcing.
