It's crucial to inspect, clean, and reinspect fiber end faces before mating connectors — whether on patch cords and trunks within the network or on the test reference cord you connect to your tester. It provides an expert-curated supplier directory, buyer-focused technical background information, and structured selection criteria to support professional procurement decisions. Even a small dust particle or scratch on the endface can increase insertion loss, reduce return loss, and introduce random link instability. In FTTH, ODN, and data center environments, you rely on consistent.
