

## Put out the fabric tail fiber

### Overview

Bring your weft through your warp yarns (either through your shed or woven manually) and leave a tail of 4.5 to 5 inches out of the side of the selvedge. Always make sure that you are leading with your needle or shuttle and trailing with your tail! Your tails are the ends of your weft yarn from whenever you start or stop a new color or run out of the previous length of yarn. Done correctly, this process ensures that the project is both durable and visually tidy, with no loose ends poking out.

Techniques for Weaving in Ends: Let's start with the most common knitting pattern: Stockinette stitch and other non-reversible fabrics. I am using the Schachenmayr Catania Grande in this. When running out of weft yarn on a bobbin, I have oftentimes simply cut off the tail (and the tail of the new bobbin) at the selvedge - after washing.

## Article Content

### Horsehair as a Textile

There probably are other animals that have the same type of slick, stiffish hair, but horses' tails are the only ones to have fibers long enough to weave with without spinning.

### Fixing & Finishing Loose Ends - needlery!

You can use tweezers to pull out the individual threads. You can also try using Judy's Boo-Boo stick by passing the large end with the brush over the clipped threads on the back of the fabric.
