

Pxtm-2 distribution box

Overview

The PXT Lighting Metering Enclosure distribution box mainly consists of structural components such as the cover plate, enclosure, transparent door, mounting rail, conductive busbars, cable entry cover and busbar barrier, and is equipped with neutral and protective earthing. The PXT Lighting Metering Enclosure distribution box mainly consists of structural components such as the cover plate, enclosure, transparent door, mounting rail, conductive busbars, cable entry cover and busbar barrier, and is equipped with neutral and protective earthing. PCE solid rubber distributor housings are made from a mixture of natural rubber, styrene and butadiene (NK/SBR). The raw material is processed – in slab form – at pressures of up to 400 t and at a temperature of 180°C. This triggers a vulcanization process which lends the distributor its final form. The PXT Lighting Metering Enclosure is widely used in power plants, substations, industrial facilities and high-rise buildings. High-quality materials and robust product designs ensure a reliable connection, signal transmission and power. Splice boxes ensure continuously reliable real-time data transmission. Inquiry Now! SPX FLOW is a global multi-industry manufacturing leader producing highly-specialized, engineered products and innovative technologies.
