

# **Selection Guide for New Campus-Grade Optical Transceiver Modules**

## **Overview**

This guide helps network engineers and field technicians choose the right single-mode transceiver campus optics, using real-world deployment checks and a step-by-step implementation workflow. A mismatched module can throttle bandwidth, break compatibility, or cost thousands in unnecessary upgrades. In this guide, we. An SR (Short-Range) SFP/SFP+ module is a multimode optical transceiver designed for short-distance Ethernet links, typically operating at 850 nm over MMF. The most common form factors include SFP, SFP+, QSFP+, QSFP28, and OSFP. SFP (Small Form-factor Pluggable): Used primarily for gigabit-speed Ethernet. Enterprise campus fiber links fail for predictable reasons: wrong optics for the fiber plant, incompatible switch firmware expectations, or modules that drift outside temperature and power budgets.
