

# Selection of Grounding Materials for Distribution Boxes

## Overview

26 mm 2 (10 AWG) ground wire must be used, and in all other markets a 6 mm 2 must be used. Whether you're a seasoned pro or just starting out, this comprehensive guide will give you practical insights into proper grounding techniques, with a special focus on how selecting quality materials from a reliable building material supplier impacts your entire system's safety and longevity. Each DISTRIBUTION BOX and controller must be grounded. Grounding of the units: Attach a ground wire from one of. Abstract: Distribution line grounding systems are mostly installed to lower touch and step potentials and lightning-induced outages. Reliability may suffer when the grounding system malfunctions, and operations and maintenance funds may be diverted to investigate and rectify the issues at a higher. Safety of Personnel: By safely channeling fault currents into the ground, proper grounding helps to reduce the risk of electric shock to personnel. This helps to reduce the potential difference that exists between conductive parts and the earth.
