

## Sensitivity and Relay Protection Calculations

### Overview

Relay protection calculations determine the threshold values and parameters for the protective relays based on the substation's operational and design requirements. The protective philosophy is fundamentally grounded on the understanding that faults or abnormal operating. Good and reliable selectivity of the protection is essential in order to limit the supply interruption to the smallest area possible and to give a clear indication of the faulted part of the network. This makes it possible to direct the corrective action to the faulty part of the network and the.
