

Stacked optical module connection usage

Overview

Stack setup just requires ordinary service cables instead of dedicated stack cables. Electrical ports can be connected using Category 6A or Category 7 cables. When setting up a stack, ensure that optical. AOC or optical modules + fiber optic jumpers will be used to expand the capacity between devices with a distance of more than 7 meters (in one computer room). Secondly, let's talk about AOC. The module and the cable cannot. Depending on the switch model and the number and type of stacking ports, the bidirectional stacking link provides 40 Gbps, 80 Gbps, or 160 Gbps full-duplex bandwidth. Its primary function is to achieve optoelectronic conversion by converting electrical signals into optical signals and vice versa. An. Switch stacking is to combine multiple switch devices that support stacking features, and then use dedicated cables and modules to plug in ports with stacking functions, connect these switches together, and combine them logically into a switching device. By controlling the configuration of the main. Stacked cables are a common network connection solution, mainly used in data centers and enterprise networks.
