

Stainless Steel Mesh Cable Tray Connection Method

Overview

The answer: use the right connection accessories for a secure, aligned and continuous cable support system. In most cases, sections of wire mesh baskets or electrical cable trays are joined using couplers, bolts, or proprietary connector kits. These systems support and route all types of cables. Depending on the type and version of mesh cable tray, as well as the corrosion protection used, the mesh cable tray systems can be used in ambient temperatures of - 20 °C to + 120 °C. The Cable Tray engineering standards, performance standards, test standards and application in this document have been tested extensively by competent professional engineers completely installed, without damage either to conductors or insulations without notice. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. Stainless Steel (SS) Wire Mesh Cable Trays are an essential component in modern cable management systems.
