

Strong and weak current power supplies share one cable tray

Overview

While it is technically possible to run power and low-voltage cables in the same tray under strict conditions, segregation or shielding is strongly recommended to ensure safety, compliance, and system reliability. Technical Standards and Regulations NEC (National Electrical Code) Article 300. 3 (C) (1):. It doesn't sound like you're in the US, but here in US, this is acceptable provided all of the insulation is rated for the highest voltage in the tray. If you have a 480V circuit in the tray, all cables must be insulated for at least 480V regardless of the actual voltage of the circuit. There are several requirements for the use of strong and weak current cable trays: 1. Safety: Both strong and weak current cable trays need to meet corresponding safety. TONGZHOU MACHINERY (CABLE TRAY) FACTORY has advanced production line of one-time forming of cable trays, automatic laser cutting production line, laser welding production line, automatic spraying and galvanizing production line, mainly produces six categories of products, including Wire Mesh cable.
