

Technical Requirements for Optical Cable Fusion Splicing

Mechanical drawing

Overview

A qualified optical fiber end face is a necessary condition for fusion splicing, and the quality of the end face directly affects the quality of fusion splicing. Fusion splicing is the most widely used method of splicing as it provides for the lowest loss and least reflectance, as well as providing the strongest and most reliable joint between two fibers. Therefore, we will also touch on cost factors, risk management, and best practices in. See the FOA Virtual Hands-On for the process of fiber optic cable splicing (PDF). Static electricity can build up in your clothes and body, so the use of anti-static wrist straps and/or an anti-static mat may help in preventing this from happening. This specification describes the requirements for a Fully Automatic Fusion Splicer to be used for splicing single-mode and multi-mode fibre systems in use by Transnet Freight Rail. The Fusion Splicer must be capable of.
