

The Function of Fire Fiber Optic Connectors

Overview

Fireproof fiber optics are specialized cables engineered to withstand high temperatures and resist fire propagation. Its ability to provide continuous temperature readings over long distances makes it an ideal solution for fire detection in tunnels. Fibre optic fire service and emergency response network solutions must deliver maximum availability with simultaneous failover protection – modern emergency control centres therefore rely on modular fibre optic systems with up to 96 fibres per 1U and redundant connections to IEC 61754-15. The Quantum Fire Protection Systems offers custom fire alarm & suppression systems, NFPA compliance, and 24/7 monitoring. Even CATV (cable) distribution to various local feed points within a. ORAD provides for the needs of its potential customers a wide range of advanced solutions for fire and smoke detection, smoke control and voice alarm evacuation systems.
