

## Too many Revit cable trays

### Overview

Click Manage tab Settings panel MEP Settings drop-down Electrical Settings. In the right pane, select a cable tray size, and click Modify Size. It is a "jump-over (or under)" piece that I want to use where I have to cross two trays at same level, but without a cross. Any help would be much appreciated. Thanks in advance!

05-14-2026 11:16 AM Not too. This Revit tutorial walks through setting up cable tray in revit mep, covering essential tools and techniques for your projects. Welcome back to the CAD Teacher VDCI video course content for the BIM 321 course, Introduction to Revit MEP. In this video, we're going to go ahead and start setting up. Is it possible somehow to determine all cable tray fittings connected to some presice cable tray?

Basically this is the question, but clarifications can be added if needed) There are definitely more efficient ways to do this, but you can get the connectors of all cable trays and cable tray. I'm working on a project which we have too many cable tray offsets. My automatic connection on levels changes is giving me a hard time. When the offset is over 400mm it does not create a 45 dg connection, instead it creates a 90 dg connection, and we don't like that way, so I need to change it. The cable trays aren't connecting no matter what angle I try to connect them and I am presented with the following error message in the image attached despite loading all the cable tray connectors.
