

# Tunnel Engineering Power Distribution Box

## Overview

The TAP boxes (Tunnel Application Power) from Phoenix Contact have been specially developed for safe, fireproof, and simple power distribution in tunnels. In order to cope with the extreme conditions, BS6164 provides valuable guidance on voltages, equipment enclosures, cabling, electrical protection and lighting systems to be used in tunnels. In addition, through our involvement with many tunnel projects, we have acquired much practical experience in. Power supply and distribution in a tunnel Tunnels are home to a variety of applications that need to be supplied with power in a high-availability configuration. Particularly critical subsections, such as ventilation and lighting, must continue to work even in emergency situations, for example. The Tunnel Distribution & Lighting Box provides tunnel contractors with a complete solution for temporary electrical installation that complies with competent local authorities. The systems installed there have to withstand extreme, fluctuating aerodynamic pressures, posing enormous technical challenges. Tunnel receptacle combination are key components of every tunnel system. To keep the number of joints as small as possible, the longest possible cable length to Frankfurt/Main. The analyses show that prefabricated modules made. Protect, monitor and control electrical circuits, preventing harm to persons and damage to property and equipment. Step-up and step-down power transformers in ratings from 100VA.
