

A coiled orange OM3 multimode optical fiber cable. The cable has a white LC connector at one end. A yellow label on the cable reads "800C 1200 11 1". A red label with the letter "B" is also visible. The cable is coiled in a large loop.

A low-voltage Enclosed busbar system uses conductive bars (instead of individual cables) to deliver power to devices within switchgear and control cabinets. IEC 61439 is a standard developed by the International Electrotechnical Commission (IEC) that covers design verification for low-voltage electrical products and assemblies. Their significance arises from their ability to improve efficiency, enhance safety, and streamline overall electrical systems. The SIVACON 8PS BD2 system is the universal busbar for high performance within a small space—an innovative, flexible alternative. Guide to low voltage busbar trunking systems verified to BS EN 61439-6 (Photo credit: Edvard Csanyi) This is the most common use of busbar trunking and is applied to distribute power over a predetermined area. Busbar trunking can be run vertically or horizontally, or a combination of both.
