

What products are needed for a separate micro-module data center

Overview

Inside that umbrella you'll find micro-modules and smart aisles, all-in-one containerized units, prefabricated rooms and IT pods, dedicated power and cooling blocks, and full hybrid campuses where prefabricated white-space sits inside a conventionally built civil shell. They share. Our purpose-engineered modules and components deliver scalable, long-term, and sustainable data center capacity anywhere compute is needed. As we've been building these solutions for decades, we've set the standard for rugged, reliable, long-lasting MDCs. We specialize in tailoring to specific use. A modular data center is a complete data center, or a critical-infrastructure subsystem, that is engineered, integrated, and tested in a factory before being delivered to site. Deploy the compute capacity you need — where you need it — with factory-built quality, faster installation, and predictable performance. Reduce risk by leveraging prefabricated and integrated solutions: ABB offers modular solutions that simplify execution and.
