

## What type of equipment is the material used in electrical distribution boxes

### Overview

A distribution box comprises Engineering Thermoplastics such as Polycarbonate (PC), Acrylonitrile Styrene Acrylate (ASA), or epoxy-coated or powder-coated stainless steel. Below are the essential components that ensure proper functioning and safety found in most DB boxes: What is the difference between thermoset and thermoplastic materials?

You can find distribution boxes made from various distribution box materials such as steel, aluminum, PVC, polycarbonate, high-density polyethylene, and thermoset plastics like SMC. Each distribution box material has its own. The distribution box (DB box) helps safely and efficiently distribute electrical power. Today, electrical systems are essential for homes and industries. It houses protective devices such as circuit breakers or fuses, ensuring both equipment protection and user safety.
